

FlexPackPRO[®]

IN ACTION

CASE STUDY #2

ENHANCE AN OLD PACKAGING MACHINE

ADD MODERN CODING TECHNOLOGY TO YOUR AGING PACKAGING MACHINES

FlexPackPRO's team of mounting and installation engineers can fit almost any of your existing Form, Fill, Seal machines – regardless of age – with a state-of-the-art FlexPackPRO[®] brand Thermal Transfer Overprinter.

In this case study, a leading fresh coffee producer in business since 1968 wanted to utilize an older VFFS machine to handle additional product for an important retail client. Regulations required a high-resolution production date and expiration date on each bag, but the decades-old machine was never expected to marry with a sophisticated digital date coder like FlexPackPRO[®].

After FPP's regional representative visited the plant, we were confident we could do it – and the results have been outstanding, saving the customer from buying an extremely expensive new VFFS bagger in the process!
